

CANCER TREATMENT DOSING & ADMINISTRATION CANNA-OIL PLUS ORIGINAL 14mg/ml CBD | 75mg/ml THC

Oral Dosing :

Day 1 - Day 3

- Start with the amount equal to the size of **1/4 grain of rice** once daily (PM) for several days to acclimate your system.

Day 4 - Day 7

- Increase amount equal to the size of **1/2 grain of rice** once daily (PM).

Day 8+

- Gradually increase the dosage until you are at the optimum dosage of a **1 gm syringe daily** (PM) for 60 days

NOTE:

Oral administration has a slow onset of action of 1-6 hours, with individual effects varying greatly. Some individuals who have had experience with cannabis and therefore may have a higher tolerance for THC (the psychoactive property of cannabis) may start with a larger dose.

If you are unsure how THC affects you, always err on the side of caution and start slowly.

Topical Dosing:

- Canna-Oil Plus Original can be applied topically to cancerous lesions. Apply a small amount to the lesion and cover with a bandaid until the oil has soaked into the skin.
- If dealing with a larger area, emulsify the Canna-Oil Plus Original using an oil based product such as CBD Canna-Oil, Olive Oil or Coconut Oil.

NOTE:

Onset of action is individual and results may vary

Rectal Dosing:

- One can start by using empty suppositories available at any pharmacy. The Canna-Oil Plus Original can be placed into the suppository to be used rectally allowing the patient to reach a full 1 gm dose quickly while avoiding the psychoactive effects of the product.

Day 1 - Day 2

- Start with **1/4 syringe** daily (PM)

Day 3 - Day 4

- Increase dose to **1/2 syringe** daily (PM)

Day 5 - Day 6

- Increase dose to **3/4 syringe** daily (PM)

Day 7+

- Increase dose to a **full 1 gm syringe** daily (PM)

For detailed instructions on rectal administration, please see “**Rectal Suppository Administration**” Information Sheet.

*This product has a long shelf life provided it is stored in a cool, dry place, out of direct sunlight.
